PROFILE

QA Automation Engineer with over 12 years of experience in quality assurance, from functional testing to API and end-to-end flow automation. Experience in banking, fintech, and logistics, leading QA teams and building test strategy from scratch on projects with no prior QA. I currently certify the critical flows of a digital lending fintech end to end, validating every case across the API, the database, and the logs. I also build AI-powered tools that help the team test faster with reliable data.

PROFESSIONAL EXPERIENCE

QA Automation Engineer · **Zenziya** Mar 2026 – Present

Digital lending fintech

- Certify the business's critical flows end to end (onboarding, risk engine, bank-transfer disbursements, payments, and payment agreements), checking each case against the functional and technical documentation.
- Test integrations between the API gateway (Apache Camel), the core banking system (Apache Fineract / Mifos), n8n workflows, and external services (bank, credit bureau, WhatsApp), with evidence from the API, database (MySQL), and logs (Grafana / Loki).
- Built the team's QA tooling: a test data generator by customer type, a regression runner with Playwright front-end scenarios, and a Postman onboarding suite with automated reporting.
- Created Postmax, an in-house web application for running and sharing request collections and testing pull requests.
- Introduced AI into the QA process with Claude Code and MCP servers (core banking, databases, n8n, Grafana): skills per business process that build the test plan and prepare the data, so other profiles can test with the same depth.
- Built the regression catalog, own the develop-to-main release, and wrote the IT onboarding guide for new team members.

QA Automation Engineer · **OneSolutions** Dec 2025 – Feb 2026

SmartPick project: WMS for logistics operations in large warehouses

- Was the project's first and only QA: defined quality criteria and the testing strategy for end-to-end flows.
- Designed, executed, and automated REST API and front-end tests for stock management (lots, SKUs, items, locations, and movements), validating traceability, inventory control, and transactional consistency.
- Documented critical scenarios and managed defects in Teamwork Projects, improving communication between technical and functional teams.

QA Automation Engineer · **VATES** Jun 2024 – Oct 2025

Software consultancy

- Developed and ran automated REST API tests with Java, Rest Assured, and Postman.
- Refactored Postman scripts and validations and integrated them into GitHub Actions to run regression suites in CI.
- Managed test data with SQL Developer and Excel, and maintained the technical test documentation.
- Used GitHub Copilot and reusable helpers to speed up automation development.

QA Automation Engineer · **Cybele** Feb 2024 – Jun 2024

Automation and performance

- Maintained and improved automated backend (API) tests with Cypress (JavaScript), increasing regression stability.
- Designed and ran load and performance tests with JMeter.
- Trained and supported manual QA testers, and produced execution reports to track testing progress.

Lead QA Automation Engineer · **AvenidaMas** Jan 2022 – Feb 2024

QA team leadership

- Coordinated the QA team, defined the testing strategy, and reviewed coverage, managing work in Jira under agile methodologies.
- Built end-to-end automation for web applications and APIs from scratch with Cypress and Postman, integrated with Jenkins (CI/CD).
- Validated data integrity in MySQL and MongoDB.
- Implemented monitoring with Grafana and ran load tests with JMeter.

QA Tester · **Ecosistemas** Oct 2014 – Feb 2022

Banking projects for Citibank, Santander Tecnología, Banco Hipotecario, and Banco Comafi

- Performed functional and exploratory testing of web and mobile applications.
- Developed the first automations with Selenium and Ranorex.
- Reported and tracked defects in Jira and TestRail, and validated data with MySQL queries.

TOOLS & TECHNOLOGIES

Automation: Cypress, Playwright, Selenium, Ranorex, Rest Assured
APIs & Performance: Postman, REST API testing, JMeter
CI/CD & Version Control: Jenkins, GitHub Actions, Git
Data & Observability: MySQL, MongoDB, SQL Developer, Excel, Grafana (Loki / LogQL)
Platforms: Apache Camel, Apache Fineract (Mifos), n8n
AI Applied to QA: Claude Code, MCP servers, GitHub Copilot
Management: Jira, TestRail, Teamwork Projects, agile methodologies
Languages: Java, JavaScript, TypeScript, Python, SQL

EDUCATION

Bachelor's Degree in Multimedia Communication · UADE, Argentina · 2015
Professional Front End Developer · Universidad Tecnológica Nacional · 2021
Higher Technical Diploma in Multimedia Communication · Tupac Amaru II · 2010 – 2013

LANGUAGES

Spanish: native **English:** intermediate (conversational) **French:** basic

SKILLS

- Building QA from scratch: quality criteria, testing strategy, and defect workflow.
- Business mindset: every case is certified against acceptance criteria and documentation.
- Clear documentation for both technical and non-technical audiences.
- Continuous improvement and automation of the team's repetitive tasks.
